Docket #: S25-302

Therapeutic Approach for Benign Uterine Conditions

Stanford researchers have identified a therapeutic approach for benign uterine conditions. The approach targets the endometrium directly rather than the hormonal environment that sustains them.

Evidence supporting this concept has been established in human endometrial cell models and in animal models.

Stage of Development
Preclinical

Applications

- Therapeutic for benign uterine conditions
- Alternative for patients who cannot tolerate or do not respond to standard of care

Advantages

- Mechanism distinct from current standard of care
- Preclinical proof of concept in human cell models and an animal model

Innovators

- Irving Weissman
- Suyash Raj
- Omair Khan
